Selected Academic Projects

Automatic Commit Generator
A commit message generator from source code differences between two versions of the software. The source code differences are described using a natural language description and then the natural language description is translated into commit messages using a pre-trained neural machine translation model.

Compiler
A compiler capable of generating intermediate code (assembly x86) from a Pascal program.

Blinds’ Eye
A navigation tool for blind people using an Ultrasonic sensor, MicroSD card, and Micro-controller. The interfacing language was C.

4-bit CPU
A 4-bit MIPS architecture-based Computer capable of executing 28 instructions using at most 8 clock cycles. The system was capable of executing basic instructions like add, multiply, push, pop, jump, call, halt, move, and, or, etc.
